

```
vboxuser@Yassin:~$ sudo apt install tomcat10
```

```
# You may pass JVM startup parameters to Java here. If you run Tomcat with  
# Java 8 instead of 9 or newer, add "-XX:+UseG1GC" to select a suitable GC.  
# If unset, the default options will be: -Djava.awt.headless=true  
JAVA_OPTS="-Djava.awt.headless=true"
```

```
vboxuser@Yassin:~$ sudo cp /home/vboxuser/Downloads/sample.war /var/lib/tomcat10/  
/webapps/
```

```
vboxuser@Yassin:~$ sudo chown tomcat:tomcat /var/lib/tomcat10/webapps/sample.war
```

The screenshot shows a web browser window with the URL `http://localhost:8080/sample/` in the address bar. The page title is "Sample "Hello, World" Application". On the left, there is a small cartoon cat icon. The main content area contains the text: "This is the home page for a sample application used to illustrate the source directory organization of a web application utilizing the principles outlined in the Application Developer's Guide." Below this, a note says: "To prove that they work, you can execute either of the following links:" followed by a bulleted list: "• To a [JSP page](#). • To a [servlet](#)."
